COMPUTER ENGINEERING

QUEZON CITY

COURSE CODE/TITLE:	**CPE 010**	**SECTION:**	**CPE21S4**
DATE PERFORMED:	**08-07-2026**	**DATE SUBMITTED:**	**08-10-2026**
NAME:	**DEL MUNDO, KENNETH JAMES C.**	**INSTRUCTOR:**	**ENGR. JIMLORD M. QUEJADO**

ACTIVITY NO. 1.1 **[ACTIVITY NAME]: Algorithm, Flowchart, Pseudocode**

1. PROCEDURE OUTPUT

What procedures did you perform?

Task #1

- **Compute the total and average of 3 quizzes then display the total and average.**

Algorithm:

1. Start the program
2. Ask the user to enter the three quiz scores
3. Add the three scores to get the total
4. Divide the total by 3 to get the average
5. Display the total and average
6. End the program

Pseudocode

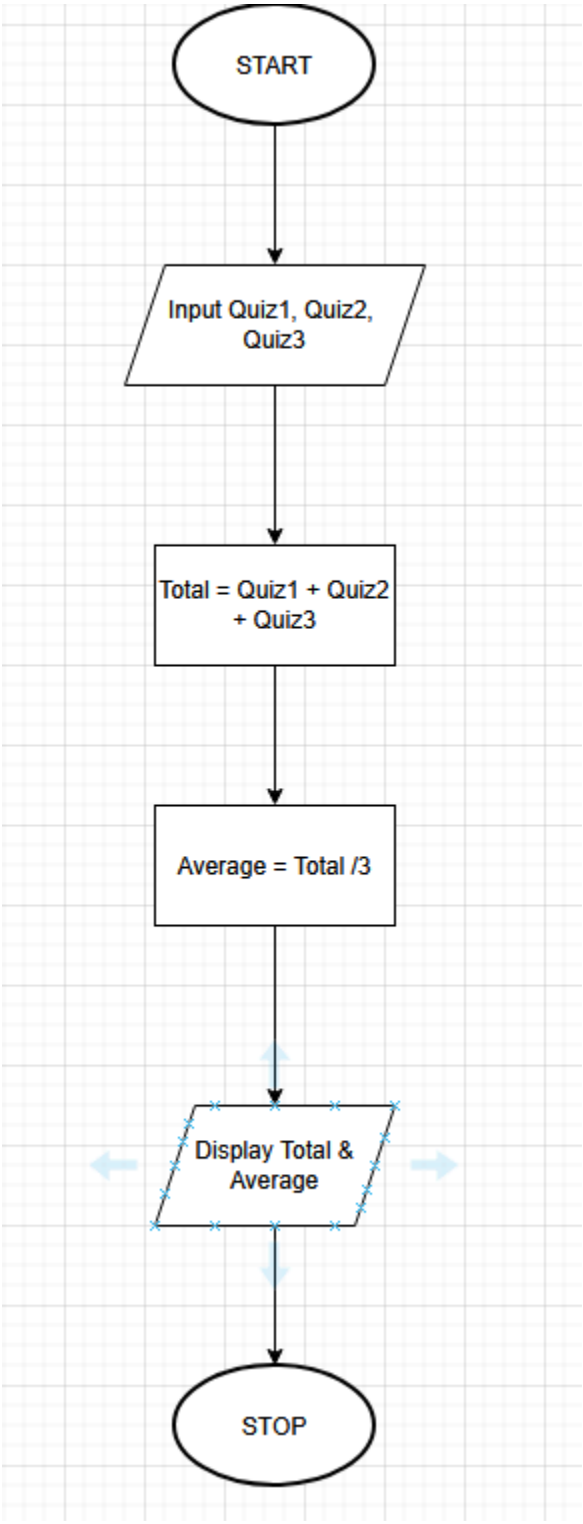

START
Input Quiz1
Input Quiz2
Input Quiz3

total = Quiz1 + Quiz + Quiz32
Average = total / 3

Output total
Output average

STOP

Flowchart:

START
Input Quiz1, Quiz2, Quiz3
Total = Quiz1 + Quiz2 + Quiz3
Average = Total /3
Display Total & Average
STOP

C++

Task1.cpp

```cpp
#include <iostream>
#using namespace std;

int main(){;

    float Quiz1, Quiz2, Quiz3, total, average;

    cout <<"Enter Quiz 1:";
    cin >> quz1;

    cout <<"Enter Quiz2:";
    cin >> quiz2;

    cout <<"Enter Quiz3:";
    cin >> quiz3;

    total = Quiz1 + Quiz2 + Quiz3;
    average = total / 3;

    cout<< "\nTotsl =" <<total endl;
    cout << "Average =" << average << endl;

return 0;
}

```

The program asks the user to enter the scores of three quizzes. It stores the values in separate variables and adds them to get the total score. After that, it divides the total by three to calculate the average. The program then displays the total and average on the screen. This program helped me understand how to use variables, input and output statements, and basic arithmetic operations in C++.

Task #2

- **Cashiering system that computes the total price of the 3 items bought, accepts payment and computes change. Display the transactions made.**

Algorithm

1. Start the program
2. Ask the user to enter the names and prices of these items
3. Add the price to get the total amount
4. Ask the user to enter the payment
5. Compute the change
6. Display the items, total amount. Patent, and change
7. End the program

Pseudocode:

START

Input item1
Input price1

Input tem2
Input price2

Input item3
Input price3

Total = price1 + price2 + price3

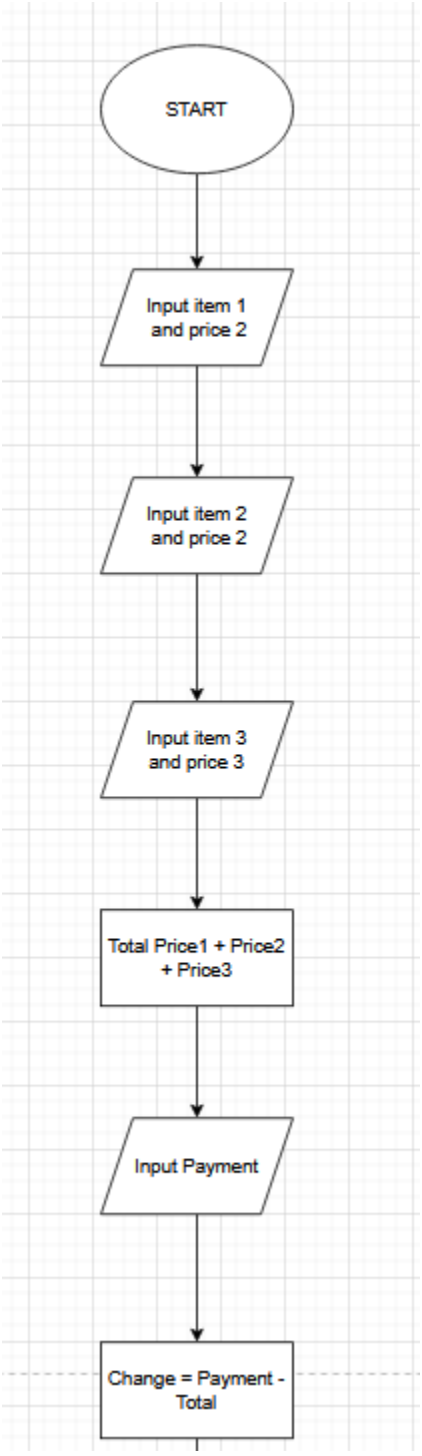

Input payment

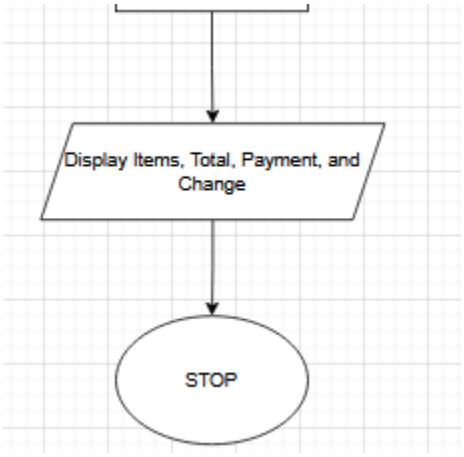

Change = payment - tidal

Display item1, price1
Display item2, price2
Display item3, price3
Display total
Display patent
Display change

STOP

Flowchart:

START
Input item 1 and price 2
Input item 2 and price 2
Input item 3 and price 3
Total Price1 + Price2 + Price3
Input Payment
Change = Payment - Total

Display Items, Total, Payment, and Change
STOP

C++

cpp.cpp > ...

```cpp
#include <iostream>
#include <string>
using namespace std;

int main()
{
    string item1, item2, item3;
    float price1, price2, price3;
    float total, payment, change;

    cout << "Enter Item 1: ";
    cin >> item1;
    cout << "Enter Price: ";
    cin >> price1;

    cout << "\nEnter Item 2: ";
    cin >> item2;
    cout << "Enter Price: ";
    cin >> price2;

    cout << "\nEnter Item 3: ";
    cin >> item3;
    cout << "Enter Price: ";
    cin >> price3;

    total = price1 + price2 + price3;

    cout << "\nTotal Amount: ";
    cout << total;

    cout << "\nEnter Payment: ";
    cin >> payment;

    change = payment - total;
```

```
35
36      cout << "\n\n----- TRANSACTION -----";
37      cout << "\nItem 1: " << item1 << " - " << price1;
38      cout << "\nItem 2: " << item2 << " - " << price2;
39      cout << "\nItem 3: " << item3 << " - " << price3;
40      cout << "\nTotal: " << total;
41      cout << "\nPayment: " << payment;
42      cout << "\nChange: " << change;
43
44      return 0;
45  }
```

The program asks the user to enter the names and prices of three items. It calculates the total amount by adding the prices of all the items. Next, it asks the user to enter the payment and computes the change by subtracting the total from the payment. The program displays the items purchased, the total amount, the payment, and the change. This activity helped me practice using variables, user input, calculations, and displaying transaction details in C++.

2. ANSWERS TO SUPPLEMENTAL ACTIVITY

Copy and paste the questions from the lab and include your answers after.

3. ARTIFICIAL INTELLIGENCE (AI) USE DISCLOSURE STATEMENT

I hereby declare that artificial intelligence (AI) tools were used, if applicable, in the preparation of this academic work. The following indicates the nature and extent of AI assistance:

Tools Used: **Chat gpt**

Examples: ChatGPT, Microsoft Copilot, Grammarly, QuillBot, etc.

Purpose of Use: **Translation tagalog to english language, telling chat gpt on how to fix the code error**

Examples: grammar correction, idea generation, formatting, summarization, code assistance, explanation of

concepts, etc.

Extent of Use: **First I tagalog it and the translate into english language and i give some questions on how the errors would work and fix it not copy paste**

Explain how AI was used and confirm that it did not replace original thinking, analysis, authorship, or completion of the required work.

By submitting this activity, I affirm that my use of AI complies with T.I.P.'s AI usage policy and does not exceed the permitted limits for similarity, automated content generation, or academic assistance.

I understand that any false, incomplete, or misleading disclosure may be subject to investigation in accordance with due process and may result in sanctions for violation of existing T.I.P. policies.

Lab activities, templates, and related instructional materials shall not be reuploaded, reproduced, distributed, or shared with external organizations or third parties without the prior express written permission of the Technological Institute of the Philippines.
